

VIBRAHAMMER

The innovative VibraHammer consist of a Dual Acting Vibrahammer, and a Dual Acting Accelerator. The VibraHammer operates by pumping fluid and simultaneously applying pull or push force.

The accelerator is a simple column of disc springs that is compressed and released by the VibraHammer. This delivers 800 to 1000 blows a minute onto the fish or obstacle

FEATURES

- The VibraHammer operates by pumping fluids through the tool
- Upwards and Downwards motion is activated by adding weight, while simultaneously pumping fluid
- The VibraHammer force is not depending on weight applied to the tool, only flowrate
- Operated by pumping fluid or Nitrogen with Foam
- Impact force up to 25-times of applied weight on accelerator
- Suitable for fishing and scale removal operations
- Reduced cycling over gooseneck compared with conventional jars
- Highly suitable for opening and closing sliding sleeves
- Used for setting or retrieving plugs
- Suitable for use in conjunction with broaches for scale removal
- Available for drilling or milling applications
- Available Sizes run from 2" - 4³/₄"
